

after5

swipe on the date, not the face.

experience-first dating. the date is the product.

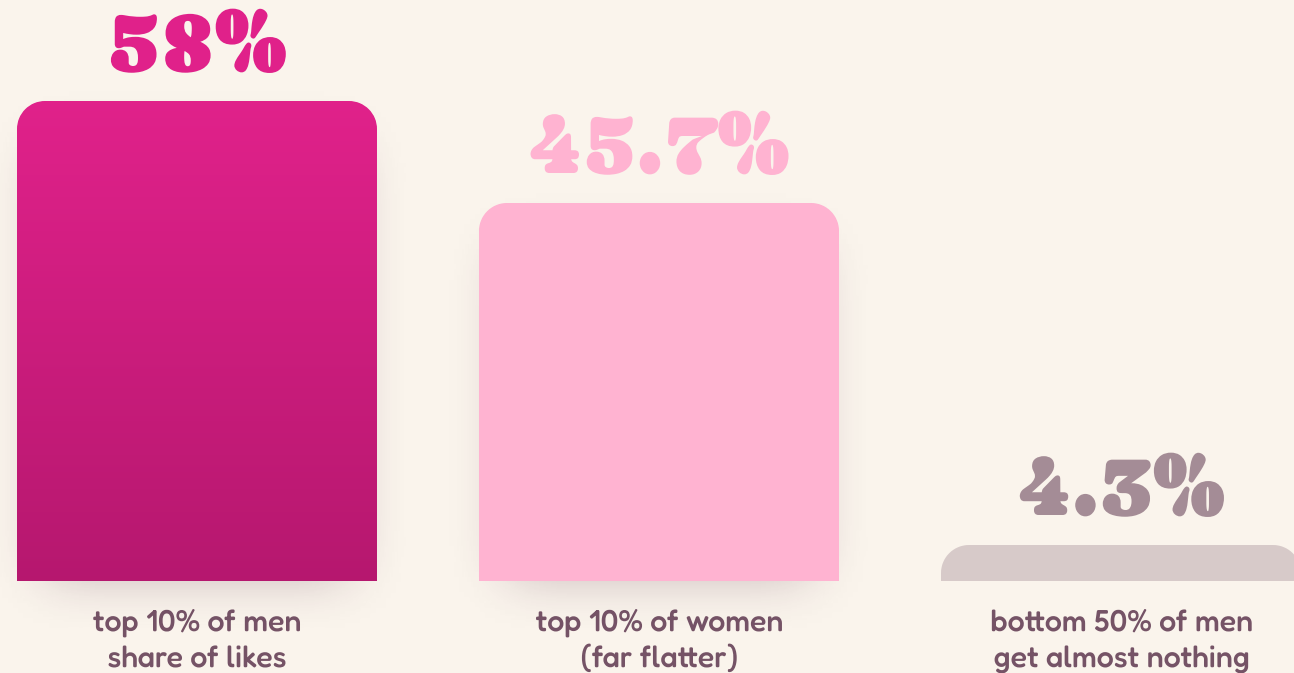

raising \$500k cad for 10%

Lucas Senechal · Founder · June 2026 · [tryafter5.app](#)

THE PROBLEM

dating apps are winner-take-all.

Hinge growth-engineer analysis (Goldgeier), 2017–18. Directional.

THE PROBLEM

both sides lose. the category is stalling.

54%

of **women** feel overwhelmed by messages

64%

of **men** feel insecure from too few

▼ 78%

of users report burnout

▼ 9%

Tinder monthly users, YoY

▼ 7.7%

Bumble revenue, YoY

THE INSIGHT

chemistry is discovered in context.

You don't know if someone's for you until you've shared an experience. Every app optimizes the part before the experience: the photo.

match on the night you'd share, not the face you'd judge.

THE MECHANIC

after5 flips the script.

01**effort inverts**

You craft a real night, not a "hey." Spam stops working.

02**judgment inverts**

Swipe the experience, not the face. The looks-lottery breaks.

03**agency inverts**

The host picks first. That choice unlocks the reveal.

04**pressure inverts**

Pass with no awkwardness. The queue promotes the next person.

social demand: "12 people matched this date."

Proof, scarcity, status. Orientation-neutral — works for everyone.

THE SOLUTION

every match arrives with a plan attached.

No endless chat. No catfishing. No dead profiles. **The loop closes and never traps you.**

THE MOAT

ai compute is what makes after5 possible.

We generate genuinely great dates on demand – real venues, real timing, real photos – at quality, in seconds, for cents. That couldn't be done a few years ago.

Hallucination-proof by design. The model writes the vibe. It never invents a place. The engine is the defensible core, and it travels.

WHY NOW

three tailwinds, on time.

01

ai crossed the bar

Quality date plans now cost cents.
Impossible in 2022.

02

gen z is leaving

78% burned out. Tinder users down 9%
YoY. The market wants a new answer.

03

experiences are hot

Spending keeps shifting from stuff to going
out and doing things.

THE OPPORTUNITY

**people already spend
real money going out.**

\$2,279

spent per person, per year, on
dates

The dating incumbents earn billions doing it badly.
after5 owns the seam they miss: **dating intent meets
experience spend.**

BMO / Ipsos, 2025 (US). Formal market-size figure in appendix.

BUSINESS MODEL

the doordash playbook.

01**after5 pro · \$19.99/mo**

Unlimited matches, priority, filters, full social-demand view. Our DashPass.

02**business marketplace**

Self-serve venue placement, promoted listings, offers, booking take-rate. Merchant ads + commissions.

03**sponsorship + ads**

Sponsored city content and event-ticketing affiliate, later.

04**engine licensing**

License the date engine to tourism and hotels. The upside lever.

Three lines fund the company. **Licensing changes the ceiling.**

PLATFORM UPSIDE

the engine travels.

The same engine that plans a date plans a weekend, a trip, a hotel guest's whole stay. Tourism boards and hotels need exactly this.

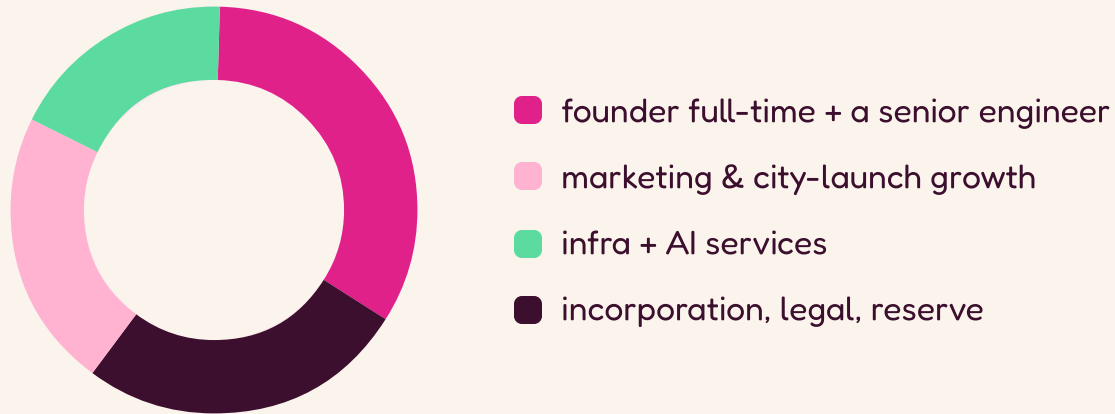

live proof: wyndham.

A board member at one of the world's largest hotel chains is taking after5 to their board after seeing the engine.

Dating is the wedge. **Licensing is the option on a much bigger company.**

USE OF FUNDS

what \$500k buys.

Roughly **12–18 months** of runway to close the loop, launch, land first paying venues, and advance the Wyndham conversation.

TEAM

built to ship. wired to distribute.

lucas, founder

Lucas Senechal – Founder, CEO / CTO. Solo-built after5 to a live product. I ship and run real apps in production.

Distribution is built in: 500,000 followers across four social accounts (X, TikTok, Instagram). I make content that goes viral. That's how we acquire users cheaply.

Done it before: raised for and built **Ego**, a social platform. It failed, and it taught me everything after5 is built on.

THE ASK

\$500k cad for 10%.

\$5m post · \$4.5m pre

Founder focus, a second engineer, marketing, and the runway to close the loop and prove the model.

after5 is live. The engine works. The category is churning. **The first mover in swipe-on-the-date takes it.**
